I was originally going to file a "Bug" titled "Haketilo seems to break StartPage search results.", but then I think I figured out what the problem is, so I decided to make it a comment here so that people searching for why this specific site isn't working can find this page. I think what people should do for now if they sometimes need tags is also install NoScript, but then now you have to interact with 2 extensions for each website you want to enable a fix for.

If you go to <https://www.startpage.com/> and do a web search, it should take you to <https://www.startpage.com/sp/search> and show you the search box with what you typed and the results below. This is what happens when you search with javascript.enabled set to false. When Haketilo is installed and javascript.enabled is set to true, Startpage does not display results or the search box properly. But then, if you also install NoScript or Haketilo, StartPage works fine again.

It seems like you can at least make results display using `document.querySelectorAll("section.w-gl.w-gl--desktop.w-gl--")[0].style.visibility = "visible";`.

- % Done changed from 0 to 100

- Status changed from New to Closed

Thanks for reminding me of this issue. It was so simple that I actually included it in [Haketilo 2.0](#). At least I had a pretext to make that release and write the news item (there was literally no other improvement since 2.0-beta1).

The <noscript> tags shall now be converted to non-standard <haketilo-noscript> tags. There may still be some issues when page applies additional styles to <noscript> tags, but it shouldn't be causing much trouble in practice :)
